

Ready-to-fit tubes – tailor-made and delivered on time

We produce your tubes made-to measure, custom-fit and ready-to install. In our own production site we offer a variety of tube processing options such as bending, soldering and welding, tailored to your needs. Finally we assemble the bended tubes according to your requirements. You receive tube systems, assembled with SERTO connections, which can be mounted or dismounted radially. On your request we can also provide the logistics and deliver the systems just-in-time.
